MEMORANDUM FOR: Directorate for Science and Technology

FROM: STAT

Science and Technology Division
Office of Scientific and Weapons Research
Directorate for Intelligence

SUBJECT: Symposium on Artificial Intelligence Applications
to Intelligence Analysis (U)

1.   On 30 November and 1 December a symposium on artificial
intelligence (AI) and its applications to intelligence analysis
will be held in the Auditorium at CIA Headquarters (agenda
attached). The main purpose of the symposium is to inform
analysts and managers of state-of-the-art AI systems and how they
can be used to improve analysis. The speakers will discuss
current and near-future systems, some of which are capable of
deductive reasoning and of responding to ad hoc questions.
Several systems demonstrations will be presented along with a
brief survey of current AI projects in the DDI.

2.   Although the focus of the symposium will be on aids to
intelligence analysis, many of the AI systems (such as "smart"
data bases) have important uses in other Agency directorates. We
invite any interested personnel in your Directorate to attend all
or part of the proceedings.

3.   A few days before the symposium a limited amount of
documentation and background information will be available for
symposium attendees. To reserve an information package,
interested personnel should contact _____ by   STAT
COB 24 November.
